

BATTERY WIRE-FREE SHADING

WIRELESS CONVENIENCE FOR THE WHOLE ULTRASOUND BLINDS RANGE

Ultrasound Blinds

Motors: YES

Wires: NO

Current architecture and interior design must continue to meet the highest aesthetic standards, offering maximum convenience and concealed technology. The Ultrasound Blinds battery-operated shading systems fulfil these requirements by offering wireless shading at the push of a button.

Unique Styling

The design of our shading systems can be further refined with a range of customisation options for each product. Unbeatable Ultrasound Blinds fabrics complement the shades, creating an individual atmosphere in every room.

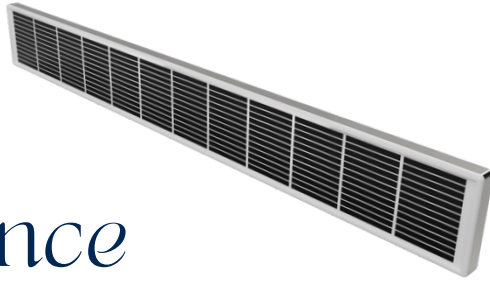

Elegant Design

These classic shading systems feature a refined design with clean lines and high-quality materials to suit a wide range of interiors.

Retrofit Installation

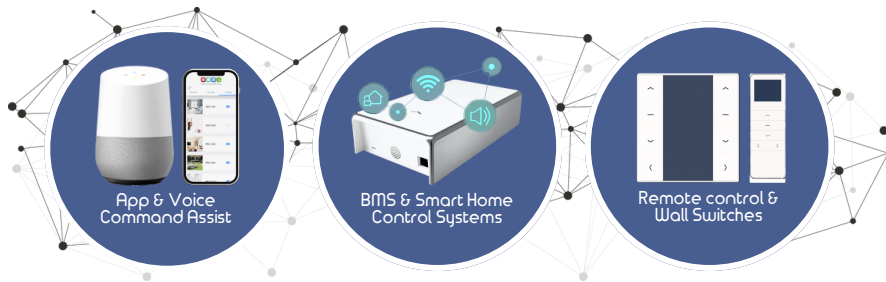

In many situations, hard wiring to a window is not possible. Ultrasound Blinds battery-operated shading systems are wireless, making them the ideal retrofit solution.

Design meets performance

Easy Battery Charging

Our interior shading products perfectly combine design and operation. The battery-operated shading systems use built-in rechargeable battery motors that are powered by either a Li-ion solar panel for continuous charge or a battery charger, that requires 6 hours of charging approximately twice a year. The motor has an easily accessible charging port where a charger can be connected for fast charging, providing clients with a discrete and inherently child-safe control.

Choice of operation

The shading systems are easily operated using a wall switch, a radio remote control, or both that can be integrated into a building centralised system or controlled by smart devices like voice command assist and mobile phone/tablet.

Ultrasound Blinds is a major supplier of high-quality interior window treatment systems.

Our advanced technology and daily commitment to perfection enables us to develop and manufacture bespoke systems for solar shading. Together with More>Less by Ultrasound Blinds, our systems offer the most convenient operation and high performance possible.
